

# Corrugation Rolls

Scherer Inc. has been in business since 1994, growing to a team of over 80 employees and three locations. Scherer serves several different industries including soy processing, flour production, feed production and forage processing. All involving particle reduction and flaking using chilled cast iron and hardened steel rolls. We specialize in reconditioning chilled iron rolls along with providing new rolls for all makes, brands, and models of mills.

## New Mill Rolls

We have been reconditioning mill rolls for the past 30 years; it is our specialty. We provide premium roll reconditioning services to ensure consistent, uniform production at your facility. Our commitment to quality and fast turnaround times ensures minimal disruption to your operations.

## Chilled Iron Mill Rolls

We offer both common and custom-sized chilled iron rolls. Mill rolls are ordered both with and without journals, allowing us to customize the rolls with specific bearing journal configurations. Chilled iron rolls are solid and commonly found in stationary 1-, 2-, 3-, and 4-pair machines.

## Chilled Iron and Hardened Steel Rolls for Specialty Grinding

Scherer has provided rolls for coffee, breweries, plastics, rubber, nut dehulling, and micro ingredients. We can produce heat-treated, hardened steel tube style rolls used in single pair, large production cracking mills. Please reach out to us for any specialty grinding and roller needs.

## Chilled Iron Rolls for the Soy Crush Industry

Scherer stocks and sells new rolls in several different wear resistant grades for all makes and models of soy dehulling and cracking mills used in the soy processing industry. We offer journal repair/replacement, bearing refurbishment on certain models. We can trace existing corrugations to save roll life and primarily use single point tooling. We also offer new flaking rolls and flaking roll reconditioning including journal replacement and repair along with bearing refurbishment. Pick-up and delivery with a dedicated trucking fleet.

## Chilled Iron Rolls for the Flour Production Industry

We stock hundreds of the common size rolls and journals utilized in the flour production industry. We utilize single point tooling for the most accurate tooth profiles and automated sandblasting for smooth frosted rolls. We offer journal repair, replacement, along with hardened bearing sleeves installed on journals. All rolls are completely wrapped in a protective covering prior to delivery. We offer complete roll pack rebuilding and can provide bearings if needed. Pick-up and delivery with a dedicated trucking fleet.
